Here's a basic cheat sheet for some of the most commonly used Windows Command Prompt

1. cd [directory]: Change directory.

   - e.g., cd Documents moves to the Documents directory.

   - cd..: Move up one directory level.

2. dir: Lists the contents of the current directory.

3. cls: Clears the command prompt screen.

4. mkdir [directory]: Creates a new directory.

   - e.g., mkdir NewFolder creates a directory named "NewFolder".

5. rmdir [directory]: Deletes an existing directory.

6. copy [source] [destination]: Copies a file.

   - e.g., copy file.txt D:\ copies "file.txt" to the D: drive.

7. move [source] [destination]: Moves a file.

8. del [file]: Deletes a file.

   - e.g., del file.txt deletes "file.txt".

9. rename [oldname] [newname]: Renames a file or directory.

10. echo [text]: Displays the specified text.

    - e.g., echo Hello displays "Hello".

    - echo %cd%: Displays the current directory path.

11. exit: Closes the command prompt.

12. find [text]: Searches for the specified text in a file.

    - e.g., find "Hello" file.txt searches for "Hello" in "file.txt".

13. type [file]: Displays the contents of a file.

    - e.g., type file.txt displays the content of "file.txt".

14. chkdsk: Checks a disk for errors.

15. diskpart: Opens the disk partitioning utility.

16. fc [file1] [file2]: Compares two files and displays the differences.

17. set: Displays all environment variables.

18. help: Provides a list of available commands and a brief description of each.
